

Waste Connections of Tennessee response to COVID-19

Waste Connections of Tennessee is making preparations to help the communities we serve as well as to protect our employees during this COVID-19 crisis. Therefore, as of Monday, March 30, 2020, we are asking our customers in Spring City to modify how they prepare their garbage for pickup. For the safety of our employees, we feel it is best to only have them touch the garbage can itself when collecting trash instead of other methods. With that in mind, we are asking that all trash be placed in garbage bags and tied securely, then placed into a 32-gallon trash can. If trash is not secured in the trash can, then we will be unable to pick up the trash otherwise. We understand that this will be an inconvenience for some of our customers. However, given the current circumstances, we feel this is the best practice to protect our employees and the general public from the possible spread of COVID-19. If you have any questions regarding this please contact us at (865) 522-8161.
